**CONTROLLING USER ACCESS**

**1. What privilege should a user be given to log on to the Oracle Server? Is this a system or an object privilege?**

**The privilege a user should be given to log on to the Oracle Server is the CREATE SESSION privilege.**

**Type of Privilege: This is a system privilege.**

**GRANT CREATE SESSION TO username;**

**2. What privilege should a user be given to create tables?**

the user needs the **CREATE TABLE** privilege.

The **CREATE TABLE** privilege allows the user to create new tables in their own schema.

**GRANT CREATE TABLE TO username;**

**3. If you create a table, who can pass along privileges to other users on your table?**

When you create a table, only you as the table owner (or a user with the **ADMIN OPTION** or **GRANT ANY PRIVILEGE** system privilege) can grant privileges on your table to other users.

**GRANT SELECT ON your\_table TO other\_user;**

**4. You are the DBA. You are creating many users who require the same system privileges. What should you use to make your job easier?**

As a DBA, to simplify the process of granting the same system privileges to multiple users, you should use roles.

**CREATE ROLE my\_role;**

**GRANT CREATE SESSION TO my\_role;**

**GRANT CREATE TABLE TO my\_role;**

**GRANT my\_role TO user1;**

**GRANT my\_role TO user2;**

**5. What command do you use to change your password?**

**ALTER USER username IDENTIFIED BY new\_password;**
